Online access to licensed e-resources

To access databases, e-books and other electronic resources licensed through the library, members of the University of Liechtenstein may choose from two options.

On campus

- **PC workstations**: One is located in the library's reading room.

- **UNI_INT**: This WiFi is available to employees and students.
Access by private devices is granted after connecting and authenticating with the username "firstname.lastname@uni.li" and personal password. To use UNI_INT, a certificate must be installed on Windows laptops or trusted on devices with other operating systems. The certificate for Windows is available by https://uni.li/cert. You need Internet access to install it.

- **EDUROAM**: This WiFi is available to employees and students even at other universities. Please access the help page for more information https://www.uni.li/eduroam.

Remote Access Citrix

By using CITRIX, licensed electronic resources can be accessed from home or via a external WiFi.

To do so, the following IT setup must be performed and login credentials must be used:
- Install **Citrix Workspace App** on personal PC/notebook.
- Download **Microsoft Authenticator** on mobile phone.
- **Username**: "firstname.lastname@uni.li" (eg. hanna.example@uni.li; no private email account!)
- **Password**: your uni.li password (same as for Moodle or my.uni.li)

Please note that you also use multi-factor authentication for this service. You will be automatically asked to do so after logging in. Then click on the Google Chrome Browser App provided by Citrix.

For "first level aid" on the Citrix application, library staff will be happy to assist you during open hours (library@uni.li).

Should you need assistance installing Citrix, please contact our IT support directly at https://uni-li.4me.com/self-service.
